

## Headset Connection Cord, and Extension Cord Jacket Specifications

| Connection Cord Specifications |                                |   |
|--------------------------------|--------------------------------|---|
| SEDFLEX Jacket:                | Temperature Range              | -40° to 60° C   |
|                                | Abrasion Resistance            | Good  |
|                                | Flexibility at Low Temperature | Good  |
|                                | Minimum Melting Temperature    | 105° C  |
|                                | Chemical Resistance            | Excellent particularly to Gasoline, ethanol, methanol, motor oil, salt solutions. |
|                                | Surface Finish                 | Smooth, easy to clean   |
| Vinyl (PVC) Jacket:            | Temperature Range              | -10° to 60° C   |
|                                | Abrasion Resistance            | Fair  |
|                                | Flexibility at Low Temperature | Poor  |
|                                | Chemical Resistance            | Good  |
|                                | Surface Finish                 | Clean, decontaminate  |
| Neoprene Jacket:               | Temperature Range              | -20° to 90° C   |
|                                | Abrasion Resistance            | Good  |
|                                | Flexibility at Low Temperature | Good  |
|                                | Chemical Resistance            | Fair  |
|                                | Surface Finish                 | Difficult to clean  |
| Silicone Rubber Jacket:        | Temperature Range              | -70° to 150° C  |
|                                | Abrasion Resistance            | Excellent   |
|                                | Flexibility at Low Temperature | Excellent   |
|                                | Chemical Resistance            | Excellent   |
|                                | Surface Finish                 | Easy to clean and decontaminate   |
