Hose™

Testimonials

Kevin Fullerton, Fire Chief
Charlotte Fire Department, MI, USA.

“Our department was in need of a good communications system for our confined space rescue team...The system we decided to go with was your Rescom Rescue Communications System. We have had the system for 2 years and put it through all the tests...the Rescom System rates as number 1 on our list and we are very pleased with our purchase. Our local supplier was very knowledgeable about the product and was very helpful when we received the system.”

Michel Goulet
MultiTrek Safety and Rescue – Ottawa, ON,

“All rope Access Technicians agreed that Rescom’s high strength communication rope coupled with it’s crystal clear hands-free voice transmission feature was an indispensable piece of equipment on this CN Tower project. The system greatly increased the workers’ comfort level 1200 feet over Toronto.”

Clark F. Baker – Training Manager
Advanced Test Reactor Training Program

“We are using the HUPERT and, so far, the equipment has improved human performance in several ways: 1st – we are using three way communication much more effectively. 2nd – it has made the workers aware of the phonetic alphabet and how easily a mistake can be made in communication if they don’t use it. HUPERT is a tool with great value; it has turned into friendly competition between groups of craftsmen. It is making us pay closer attention to procedures and follow them exactly, without putting our crafts into actual plant situations. If practice makes perfect, HUPERT will save us a lot of trouble in the years to come.”
